

Student-Council Election Tally System – Project Abstract

The Student-Council election tally system makes voting and counting votes for school elections much easier. Using paper ballots by hand is time-consuming and it is easy to make mistakes. This Student-Council Election Tally System makes managing elections easier.

Profiles can be made for candidates. Students can safely cast their votes. To keep things fair the student-council election tally system marks a voter account after they submit a ballot so that no one can vote twice. The student council election tally system also counts the votes automatically to find the totals right away.

This student-council election tally system cuts down on paper ,stops counting mistakes and shows the results faster. It is built by using Java. It can grow to include things like encrypted logins.

Simple Roadmap

1. Technology: Java

2. Main Menu

===== STUDENT-COUNCIL ELECTION TALLY SYSTEM =====

3. Add Candidate

4. View Candidates

5. Register Voter

6. Cast Vote

7. View Election Results

8. Exit

9. Create Basic Classes

Candidate: Candidate ID, Name, Position, Vote Count

Voter: Voter ID, Name Has Voted Status

Election Service: Methods for adding candidates registering voters casting votes and displaying results

4. Development

Step 1: Add Candidate: Candidate ID and Name save the details.

Step 2: View Candidates: Show the list of candidates.

Step 3: Register Voter: Ask for Voter ID . Set the voting status to false at first.

Step 4: Cast Vote:change the voter status to voted.

Step 5: Show the results.
